

ROOF SURVEYS

Roofconsult Ltd is a roofing and cladding consultancy specialising in flat roofing and metal sheeting & cladding.

If you have a problem with a flat or metal roof, then we can help.

We will carry out a condition survey and produce a detailed report with photographs including recommendations for any remedial action required.

As an independent roofing consultant we can give impartial advice on the different roof system available in the market place, and recommend those most suitable for your roofing problem identified in the roofing survey.

We will also supply a specification for the works, suggestions on suitable roofing contractors and will monitor site progress as required.

If necessary we will arrange to have test cuts taken to determine the form of construction.

If the roof is new or work is in progress, we will check the construction for compliance with the contract specification and manufacturer's recommendations.

Note It is the client's responsibility to provide safe access and a safe working area in order to carry out the inspection.
